Switzerland, and Liechtenstein

Material Applications (★ Highly Recommended ● Recommended ○ Suggested)

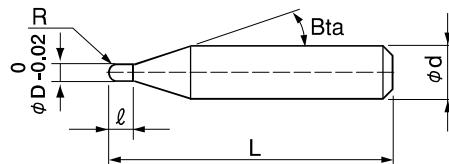

Work Material																	
Carbon Steels	Alloy Steels	Prehardened Steels	Hardened Steels					Cast Iron	Aluminum Alloys	Graphite	Copper	Plastics	Glass Filled Plastics	Titanium Alloys	Heat Resistant Alloys	Cemented Carbide	Hard Brittle (Non-Metallic) Materials
S45C S55C	SK / SCM SUS	NAK HPM	~ 50HRC	~ 55HRC	~ 60HRC	~ 65HRC	~ 70HRC										
			●	●	●	●	●										

Features

Dramatically improved the milling efficiency. Maximum 27 times higher chip evacuation compared to conventional tool.
New ball tip design offers polish-less bottom surface finishing.

Affordable pricing.

Diameter Tolerance: 0/-0.02

The shank taper angle shown is not an exact value and to avoid contact with the work piece, we recommend the user controls the precise value of this angle. Shank taper angle should not make contact with the work piece.

4 Flutes HARDMAX

Milling Conditions for HFB / HFB-S

◆Finishing (overhang length ~6D)

WORK MATERIAL		PREHARDENED STEELS / HARDENED STEELS (35~60HRC) Coolant: Oil Mist			
Model Number	Radius of Ball Nose (mm)	Spindle Speed (min ⁻¹)	Feed Rate (mm/min)	a_p Axial Depth (mm)	a_e Radial Depth (mm)
4020-0300	R1	26,000	2,000	0.02	0.06
4030-0450	R1.5	25,000	1,800	0.03	0.07
4040-0600	R2	22,500	1,500	0.04	0.08
4060-0900	R3	15,000	1,000	0.06	0.12
4080-1200	R4	11,250	750	0.08	0.16
4100-1500	R5	9,000	600	0.1	0.2
4120-1800	R6	7,500	500	0.12	0.24

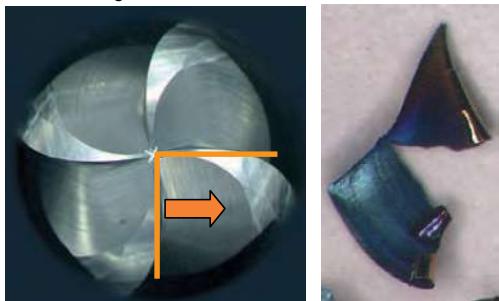

Note:

- Decrease the feed rate more than 50% from the milling parameters when slot milling.
- Decrease both spindle speed and feed rate proportionally when the milling parameters exceed the machines maximum speed, or when the tool is chattering and heats up to a red color.
- Adjustments are recommended when finishing with an overhang of over 6xD.
- Recommend air blow or oil mist. For materials under 45HRC, recommend water soluble coolant.

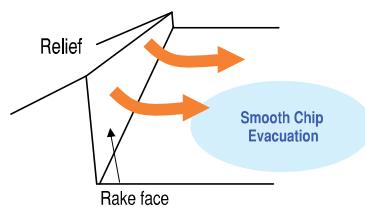

Feature 1 Special Design Achieves Outstanding Chip Evacuation

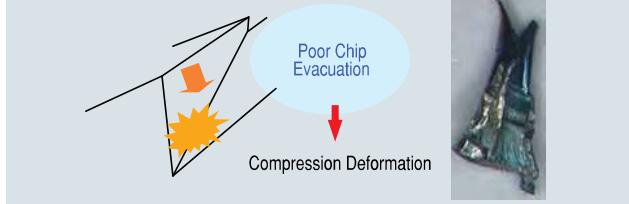

HFB Design

Flat (Non-rolled up) chip shape shows smooth chip evacuation.

Conventional Design

Smooth chip evacuation achieves more stable milling.

	HFB	Competitor A	Competitor B
Tip Point			
Milling Surface			
Chip Condition			

Tool	R2
Work Material	YXR33 (58HRC)
Spindle Speed	6,000 min ⁻¹
Feed Rate	2,400 mm/min (Slotting : 1,200 mm/min)
a_p	1 mm (0.25D)
a_e	1 mm (0.25D)
Overhang Length	15 mm
Coolant	Air Blow (Through Spindle)
Pocket Size	100 × 20 × 6 mm (X × Y × Z)
Cycle Time	28.2 min

D : Outside Diameter

4 Flutes

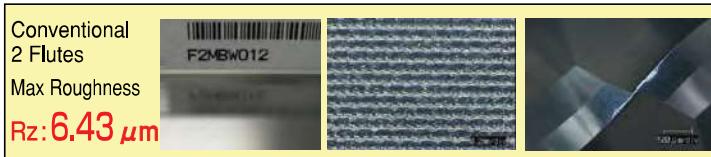

The large pocket design of the HFB promotes better chip evacuation and longer tool life when compared to a conventional design which shows premature damage.

Feature 2 Polish-less Milling by 4 Tip Grooves

STAVAX (53HRC) Milling Example: Flat Surface Finishing HFB (R3)

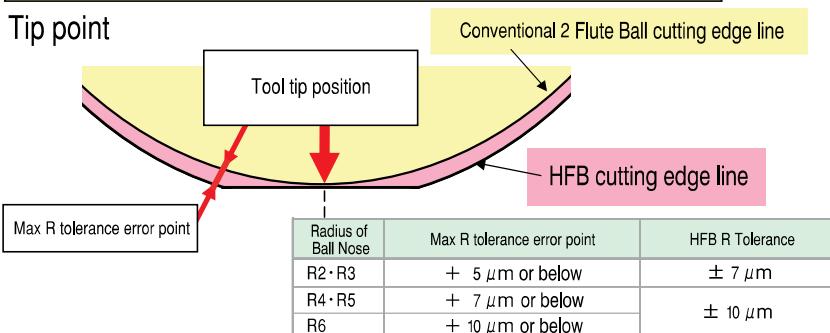

Spindle Speed	12,800 min ⁻¹
Feed Rate	2,500 mm/min
a_p	0.06 mm (0.01D)
a_e	0.12 mm (0.02D)
Coolant	Oil Mist

4 grooves on the tip point help surface finishing process. Max roughness values was 0.9 μm on 1hour testing.

The tool condition is better than conventional 2 Flutes.

Tip point

4 Tip Point Grooves

Smooth chip evacuation reduces damage at the tip.
